

What is claimed is:

1. A light illuminated photo frame comprising:

a frame body having a front side provided with a flange on each of four edges thereof, therefore forming a central depression, the frame body
5 having a rear side provide with a foldable supporting leg means for erecting the frame body;

a light emitting device disposed in the central depression of the frame body for illuminating an area defined by the central depression;

an ornamental frame having a rectangular central opening and having a
10 frame face provided with a selected pattern for decoration; and

a loop cover having a plurality of fixing tongues on a rear side thereof;

a photo being disposed between the light emitting device and the loop cover, the fixing tongues around the loop cover being inserted into and locked with the flanges around the front side of the frame body so as to
15 connect the frame body, the ornamental frame, the light emitting device, the photo and the loop cover together.

2. The light illuminated photo frame of Claim 1, wherein the light emitting device includes a light reflection board and a fluorescent tube;
20 wherein the light reflection board is a transparent panel fitting in with the central depression of the frame body and is uniformly distributed with a plurality of light reflecting dots; wherein the fluorescent tube is disposed on a lateral side of the light reflection board and illuminates throughout the light reflection board.

25 3. The light illuminated photo frame of Claim 2, wherein the light emitting device includes a light scattering film covering a front side of the light reflection board, the light scattering film being a film with a roughened surface.
